

## Risks Disclosure

This document outlines some of the most common risks associated with participating in the FOREX international currency market. The User acknowledges that through this document they have been adequately warned of the risk of financial losses, and they fully understand that other risks not outlined in this document may arise unforeseen as a result of the nature of

the FOREX international currency market.

### 1. Leverage risks and effects

1.1. Even a relatively minor deviation of the rates in marginal trading can bring either considerable gains or considerable losses. As such, when making any transactions the User runs the risk of losing all his deposited funds, and is solely responsible for the use of his funds and his transaction strategy as regards the use of leverage.

### 2. Technical and Communication Risks

2.1. The User bears all responsibility for their financial losses incurred as the product of ignorance of the instructions provided in the Trading Terminal Instruction Manual.

2.2. The User accepts any risks or losses incurred because of a lack of information, communication, or malfunction in electronic, hardware, or software systems on the User's side.

2.3. The User bears all responsibility for maintaining the confidentiality of information received from the Company, sent to the Company by electronic or other means, and any losses that are incurred as the result of unauthorized access to the User's account by third parties.

2.4. The User bears all responsibility for any losses incurred as the result of a delay in or failure of delivery of a message sent by the Company.

2.5. The activity of any third parties that may influence the cooperation between the Company and the User is not the responsibility of the Company.

### 3. Force Majeure

3.1. In the case of Force Majeure circumstances, the User accepts the inherit risks of losses incurred. Force Majeure circumstances are understood to include but not be limited to:

hostility, terrorist attacks, acts of God, trading halts at financial markets, sharp decrease of liquidity caused by financial market instability, currency interventions, and legislation changes.
